EXP.NO-8	Configuring User Management and Role-Based Access Control (RBAC)

AIM:

To configure user management, assign custom roles, and implement Role-Based Access Control (RBAC) in the Patient Appointment & Scheduling Management application built using Zoho Creator to protect appointment information and restrict form/report permissions according to user roles (CEO/Admin, Doctor, Patient).

Objective:

Learn how Zoho Creator manages users, permissions, invitations, and role hierarchies. • Create and define custom Doctor and Patient roles with their own permission profiles. • Enforce component-level restrictions on Forms, Reports, and Pages. • Configure patient-specific report filtering using the logged-in user identity and automate patient email entry.

PROCEDURE:

Step 1: Defining Roles in Zoho Creator Establish the functional roles required for secure patient appointment management.

a. Open the Patient Appointment & Scheduling Management application in Zoho Creator builder mode.

b. Navigate to Settings > User Permissions > Roles

c. Create or verify the role hierarchy shown in the application:

   i. CEO (Admin): Supervises the application and manages clinic operations, doctors, and appointments.

   ii. Doctor: Accesses authorized appointment schedules and patient appointment status information.

   iii. Patient: Books appointments and accesses only their own appointment information

Step 2: Configuring Component-Level Permissions

Set up access, view, edit, and delete permissions for the application modules.

a. Open Settings > User Permissions > Permissions.

b. Create or open the custom profiles Doctor_Permission and Patient_Permission.

c. In Doctor_Permission, grant access to the Appointment_Booking_Form and selected appointment reports required for the doctor workflow. Allow editing of the appointment-status report only when necessary; keep Delete, View all, and Modify all disabled.

d. In Patient_Permission, permit access to the Appointment_Booking_Form for new bookings.Disable edit, delete, unrestricted report access, and administrator-only pages. Grant View to the patient-specific My_Appointments report once its filtering is verified.

e. Keep Clinic_Command_Center_Page restricted from patients. Configure Doctors / All Doctors visibility only for information appropriate to the assigned role. Click Update to save each profile.

Step 3: Inviting Users and Assigning Roles

After configuring the permissions and record restrictions, onboard test users into the application.

a. Open the application sharing/user management interface (Share or Manage > Users, according to the Creator interface).

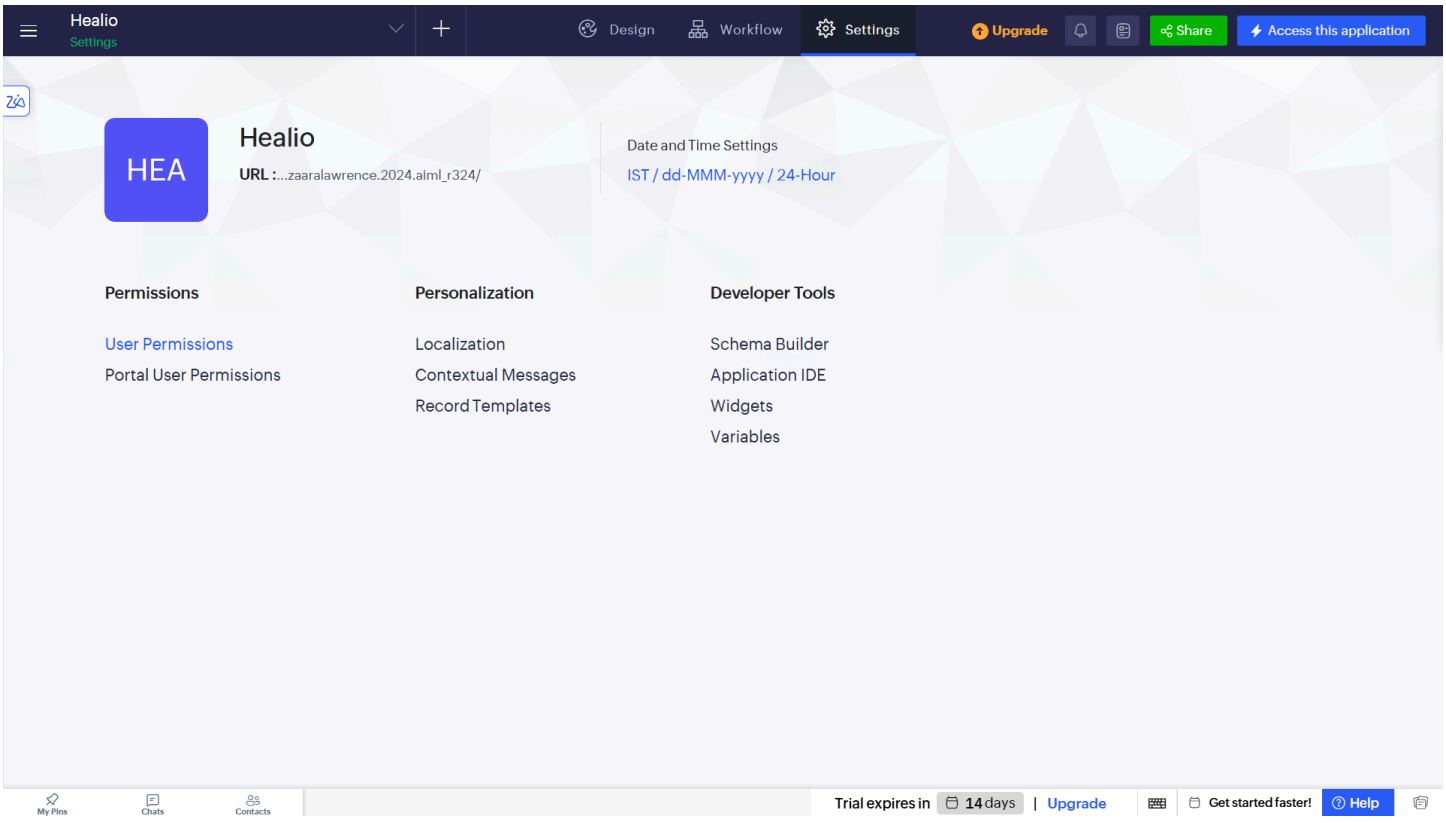

b. Choose Add User / Invite User and enter the intended test user email address.

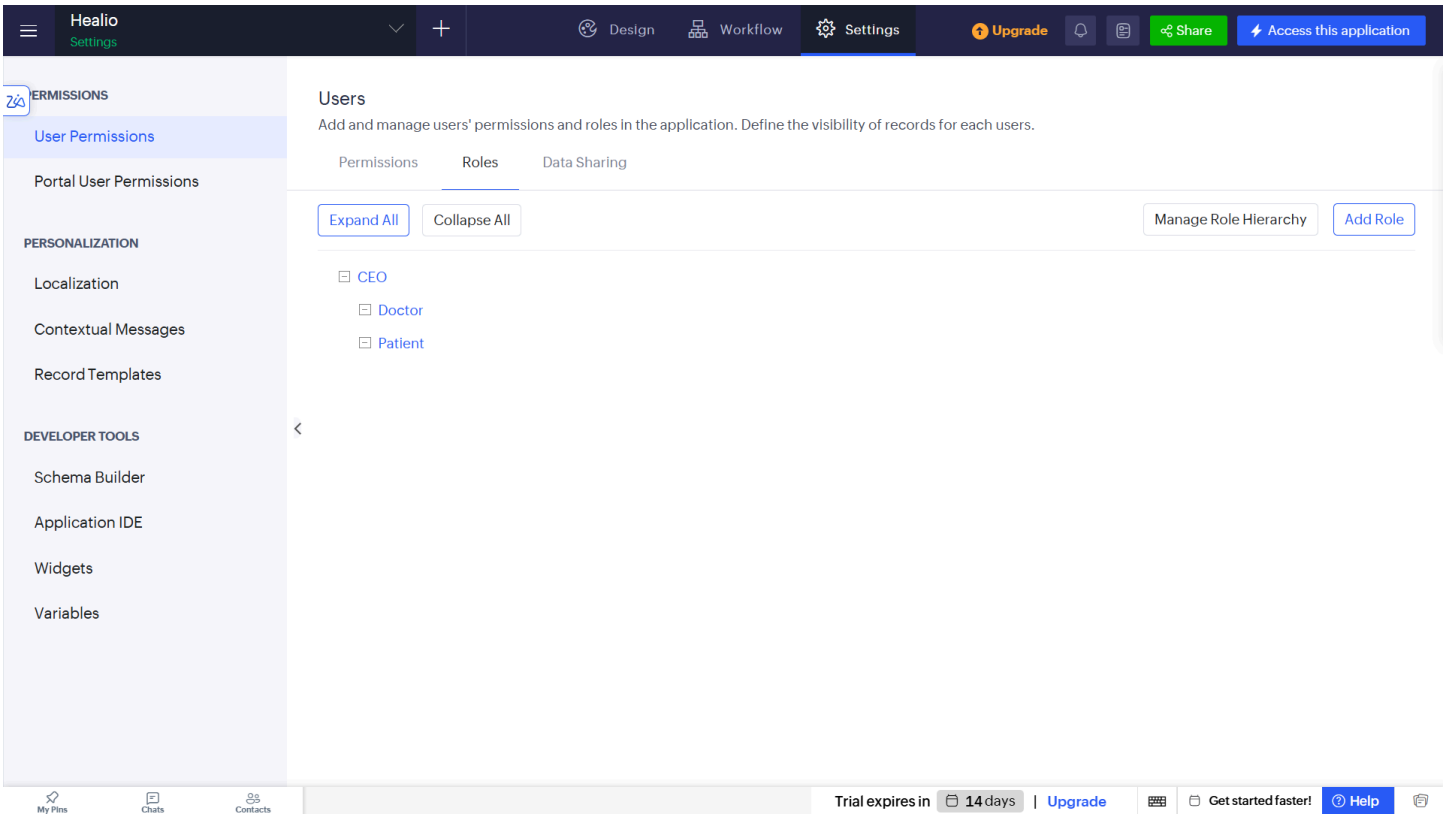

c. Assign Doctor with Doctor_Permission to a doctor test account, or Patient withPatient_Permission to a patient test account.

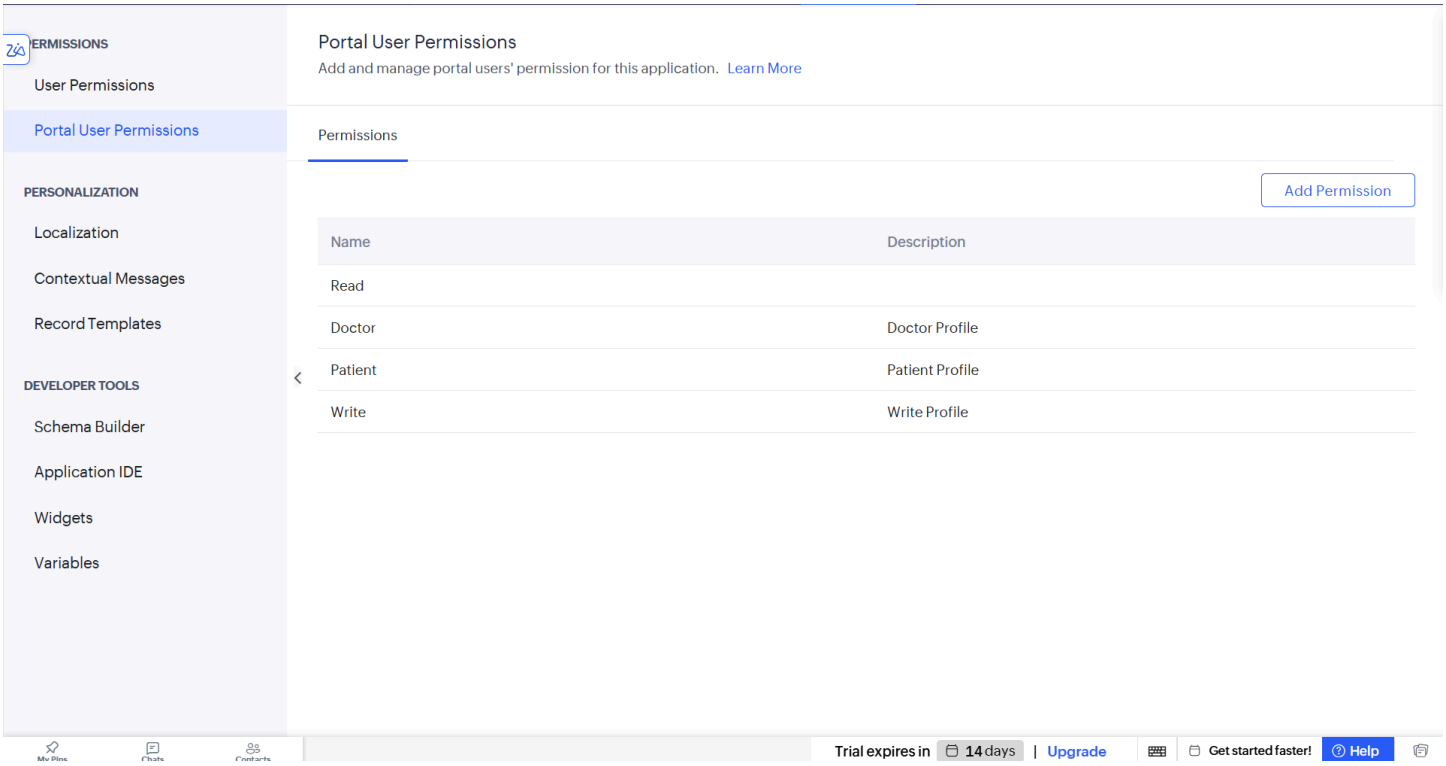

d. Send the invitation if the plan allows additional users. For portal users, use the separate Portal User Permissions configuration.

e. Log in with each test account and verify that appointment records, reports, and pages are accessible only as authorized.

RESULT:

The Patient Appointment & Scheduling Management application was configured with the CEO, Doctor, and Patient role hierarchy and with Doctor_Permission and Patient_Permission profiles.Final verification of record-level privacy and user invitations must be performed using separate test accounts before considering access control fully validated.
